                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                à
                                                                                                                                                                                                                                                                                                                                                                                                                        8
Patent No. 6331427
GENERAL INFORMATION:
APPLICANT: Robison, Keith E.
APPLICANT: Robison, Keith E.
TITLE OF INVENTION: Nucleic Acid Molecules Encoding Human Protease Homologs
FILE REFERENCE: 5800-24, 035800/176965
CURRENT APPLICATION NUMBER: US/09/280,116A
CURRENT FILING DATE: 1999-03-26
NUMBER OF SEQ ID NOS: 268
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 114
LENGTH: 789
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             654 GAGCAGCCTAGGCAGAGCTCCGCGGCAGAGAGCCGGTGCTCTGGAAGACCTGAAAGAAG 595

Sequence 1, Application US/09858664A
; Sequence 1, Application US/09858664A
; Patent No. 6482624
; GENERAL INFORMATION:
; APPLICANT: WEI, WING-Hui, et al.
; TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
; TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
; TITLE OF INVENTION: THEREOF
; TITLE OF INVENTION: THEREOF
; TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
; TITLE OF INVENTION: ACID MONBER: US/09/858,664A
; CURRENT APPLICATION NUMBER: 09/711,134
; PRIOR APPLICATION NUMBER: 09/711,134
; RATOR FILING DATE: 2000-11-11
; NUMBER OF SEQ ID NOS: 33
; SOFTWARE: FRAESEQ for Windows Version 4.0

   Direct Submission
Submitted (22-MAR-2000) Genome Sequencing Center, Washington
University School of Medicine, 4444 Forest Park Parkway, St. Louis,
MO 63108, USA
On Sep 1, 2000 this sequence version replaced gi:7637349.
  NOTE: This is a 'working draft' sequence. It currently consists of 31 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 10, 2003 this sequence version replaced gi:22855456.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bom.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Na to the estimated size. The sequence may extend beyond the ends of the Clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
  * NOTE: Estimated insert size may differ from sequence length

* (see http://www.ngsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a "working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* Location/Qualifiers

            ALL SUBMINISTATION WELLCOME TRUST Sanger Institute, Hinxton, Cambridgeshire, CB10 15A, UK. B-mail enquiries:

Cambridgeshire, CB10 15A, UK. B-mail enquiries:

Numquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Apr 7, 2002 this sequence version replaced gi:19699553.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only as mall overlapp as described above.

This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em; EMBL; Sw;
SMISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP
thup://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-192P17 is
from the RPCI-23 Mouse PAC Library
constructed by the group of Pieter de Jong.

  WGS-discovery: Paired-end low-coverage whole genome shotgun reads were generated from 129S1/SvImJ, C3H/HeJ, and BALB/CByJ. The WGS reads were placed uniquely on the MGSCv3 C57BL/6J assembly and SNP detection was carried out by SSAHA-SNP. 225,000 reads were
  as STSs and 81,000 SNPs were annotated with alleles from C57BL/6J and the strain from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.

NCI_CGAP_Ct1 is a normalized cDNA library containing the following tissue(s): Osteoarthritic Cartilage The library constructed according to Bonaldo, Lennon and Soares, was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oilgo-df primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT713-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the moment of the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the moment of the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the moment of the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the

   601 bp mRNA linear EST 27-NOV-2000 UL-R-BS2-beg-h-06-0-UI.S1 UI-R-BS2 Rattus norvegicus cDNA clone BF398067
  411
  Email: bento-soares@uiowa.edu
The sequence contained an oligo-dT track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized embryo at 13 dpc library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Seq primer: M13 Forward
POLYA-Yes.

  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Direct Submission

Submitted (13-FEB-2002) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 18A, UK. B-mail enquiries:

Cambridgeshire, CB10 18A, UK. B-mail enquiries:

humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk

On Feb 14, 2002 this sequence version replaced gi:17977879.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations

together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission

corresponding to the overlapping clone, as we submit sequences with

only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate

chemistry or covered by high quality data (i.e., phred quality >=

30); an attempt was made to resolve all sequencing problems, such

as compressions and repeats; all regions were covered by at least

one plasmid subclone or more than one M13 subclone; and the

assembly was confirmed by restriction digest. The following

absembly was confirmed by associate primary accession numbers given

in the feature table with their source databases: Em: EMBL; Sw:,

SWISSEROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP

NOTE: This is a 'working draft' sequence. It currently consists of 13 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
  Center: Washington University Genome Sequencing Center
Center code: WUGSC
   Quality coverage: 5.67 in Q20 bases, agarose-fp Quality coverage: 5.55 in Q20 bases, sum-of-contigs

Direct Submission
Submitted (22-MAR-2000) Genome Sequencing Center, Washington
University School of Medicine, 4444 Forest Park Parkway, St. Louis,
MD 63108, USA
On Sep 1, 2000 this sequence version replaced gi:7637349.
   Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 164766)
Waterston, R.H.
Waterston, R.H.
Unpublished
   * NOTE: This is a 'working draft' sequence. It currently consists of 31 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as * runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
 sapiens chromosome 1 clone RP11-245P10, WORKING DRAFT

Site_2: Noti, This normalized library was constructed from
1 million independent clones. cDNA synthesis was initiated
using an oligo(dT) primer, using methylated C in the first
strand synthesis reaction. Following this first strand
reaction, double-stranded cDNA was blunted, ligated to
NotI adapters, digested with EcoRI, size-selected, and
cloned into the NotI and EcoRI compatible sites of a
custom modified MCS of the pBluescript (KS+) vector. The
library was normalized in 2 rounds using conditions
adapted from Soares et al., PNAS (1994) 91: 9228-9232 and
Bonaldo et al., Genome Research 6 (1996): 791, except that
used."

/clone_lib="Wouse 10kb plasmid UUGCIM library"
/note="Vector: PWD42nv; Purified genomic DNA from M.
musculus G57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resources/documents/dnares/). The
City of the Jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was hydrodynamically sheared by repeated mote access. The
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pwD42 (gi|4732114|gb|AF129072.1) a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
chemically-competent E. coli Xil10-Gold (Stratagene) cells
and selected for ampicillin resistance."

The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition associated with decreased expression of treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disorder include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, melanoma, complete include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, disease, disease, attendered Immune thyroiditis, gout, bronchitis, Crohn's disease, disease, costecarthritis, osteoprosis, pancreatitis, posteoprosis, pancreatitis, posteoprosis, pancreatitis, posteoprosis, pancreatitis, posteoprosis, osteoprosis, pancreatitis, posteoprosis, cirrhoais, hepatitis, batcoprosis, disease, disease, carentised, parasitic, fungal, viral, protozoal and helminthic infections) growth and development disorders (arterioschesis, cirrhoais, hepatitis, caseular disease (arteriovenous fistula, hypertension, vasculitis, cancular disease (arteriovenous fistula, hypertension, vasculitis, ischaemic heart failure, angina pectoris, myocarditis, circhaemic heart failure, angina pectoris, myocarditis, circhaemic heart failure, angina pectoris, myocarditis, circhaemic heart failure, angina pectoris, myocarditis, chronic bronchilis, lung tumours); lipid disorder (fatty liver, Fabry's disease, Niemann-Pick's disease, human corrections of a test compound and in gene therapy. The present sequence is human corrections.
   New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, and diseases such as cancer, comprise human kinase polypeptides.

  The present sequence encodes a human protein with putative function in signal transduction. The polypeptide is designated H19G5. The protein is capable of regulating signal transduction and exhibits kinase activity.

The H19G5 transcript is expressed in the heart. H19G5 polypeptides and polymucleotides are useful for preventing or treating a cardiac disease. The H19G5 transcript is expressed in the heart. H19G5 polypeptides and polymucleotides are useful for preventing or treating a cardiac disease, hypertrophic cardiomyopathy, restrictive cardiomyopathy, mitral valve disease, aortic valve disease or tricuspid valve disease, angina pectoris, myocardial infarction, cardiac arrhythmia, pulmonary, arterial cardiac tumours in humans. The polypeptide is also useful for detecting the expression of a protein capable of regulating signal transduction or the expression of a protein capable of acting as a donor or acceptor molecule of a phosphate group. The monoclonal antibodies can be used as probes for detecting discrete antigens expressed by tissue or cell samples, and therefore used in humans for localization and monitoring of

  The invention provides human protein kinases and protein kinase-like enzymes and polynucleotides encoding the polypeptides. The kinase compares and their modulators are useful for treating a disease or disorder such as cancers of hematopoletic origin, diseases of the cancers of hematopoletic origin, diseases of the cancers of hematopoletic origin, diseases of the cancers of hematopoletic origin, diseases of the cancers of hematopoletic origin, diseases of the cancers of the peripheral nervous system, diseases. Parkinson's disease, multiple sclerosis, amyotrophic cancers and fungi, ocular diseases, migraines, pain, sexual dysfunction, hypertension, psychotic disorders, contain disorders, dyskinesias, condisorders, attention disorders, continon disorders, dyskinesias, metabolic disorders, and organ transplant rejection. They are also useful for treating rhinitis, authormunity, atherosclerosis, psoriasis, osteoarthritis, asthma, chronic inflammatory pervic disease, chronic inflammatory bowel disease, rheumatory disorders on a diabetes, obesity, cardiovascular diseases such as glaucoma, retinopathy and macular degeneration, cullar diseases such as glaucoma, retinopathy and macular degeneration, dementia, manic depression, etc. The polynucleotides are useful in gene charapy techniques to treat the above mentioned disorders. Sequences charapy techniques to treat the above mentioned disorders. Sequences

   The invention relates human kinases (PKIN) and their corresponding nucleic acid sequences. PKIN and its DNA are useful for diagnosing, reating and preventing cancer, an immune system disorder (e.g., acquired immune deficiency syndrome (ALDS), Addison's disease, allergy, asthma, atherosclerosis, multiple sclerosis, psoriasis), disorders affecting growth and development (e.g., arteriosclerosis, cirrhosis, hepatitis), cardiovascular disorder (e.g., hypertension, myocardial infarction, Goodpasture's syndrome), and a lipid disorder (e.g., fatty liver, hyperlipidaemia, obesity), and for assessing the effects of exogenous compounds. Anti-PKIN antibody is useful in a diagnostic test for a compounds. Anti-PKIN antibody is useful in a diagnostic test for a biological sample. A composition comprising PKIN in a gonist or antagonist of PKIN is useful for treating a disease or condition associated with decreased or increased expression of functional PKIN.

   The invention relates to an isolated human serine/threonine or protein kinase, 59079 or 12599 polypeptide, encoded by nucleic acidd molecule comprising at least 85% identity to the nucleic acidd subscience and abstiled are least 85% identity to the nucleic acidd subscience and another or activity or their fragments. Also included are a non-human host of the kinases or their fragments. Also included are a non-human host cell containing the nucleic acids, an antibody specific for the proteins, identifying a compound which binds to the kinase (by contacting the compound and modulating the activity of kinase using the identified compound and modulating the activity of kinase using the identified compound. The kinases and their encoding nucleic acids are useful as diagnostic and therapeutic the activity of kinase using the identified compound. The kinases and their encoding nucleic acids are useful as diagnostic and therapeutic or unwanted 59079 or 12599 activity in a subject, including or unwanted 59079 or 12599 activity in a subject, including cardiovascular diseases or condition associated with an aberrant or unwanted 59079 or 12599 activity in a subject, including cardiovascular diseases such as thrombocycopaenia, leukaemia, Hodgkin's disease, haemolytic anaemia; cellular proliferative disorders are included in the specification). The kinases, their cand disorders are included in the specification). The kinases, their cand disorders are included in the specification). The kinases to chargonetic assays, and monitoring mucleic acids and antibodies are useful in screening assays, detection assays (e.g. forensic biology), and predictive medicine (e.g. diagnostic assays, prognostic assays, and monitoring public databases to conding nucleic aming mucleic assays, and monitoring public databases to definify by the rimases and their encoding nucleic acids and antibodies are neceding nucleic acids and antibodies are neceding nucleic acids and antibodies are neceding nucleic acids and antibodies are neceding nucleic acids

  The present sequence encodes a human protein with putative function in signal transduction. The polypeptide is designated H19G5. The protein is capable of regulating signal transduction and exhibits kinase activity. The H19G5 transcript is expressed in the heart. H19G5 polypeptides and polymorlectides are useful for preventing or treating a cardiac disease, such as congestive heart failure, dilated congestive cardiamyopathy, hypertrophic cardiamyopathy, restrictive cardiamyopathy, mitral valve disease, aortic valve disease or tricuspid valve disease, angina pertoris, myocardial infarction, cardiac arrhythmia, pulmonary, arterial or rhenovascular hypertension, arteriosclerosis, atherosclerosis and cardiac tumours in humans. The polypeptide is also useful for detecting the expression of a protein capable of regulating signal transduction or conscious of a protein capable of acting as a donor or acceptor molecule of a phosphate group. The monoclonal antibodies can be used as a second or a detecting the cardiac protein capable of acting as a donor or acceptor and the cardiac protein capable of acting as a donor or acceptor and the capacity of the expression of a protein capable of acting as a donor or acceptor and the capacity of the cardiac and discrete antigens expressed by tissue or cell as

   The invention comprises the amino acid and coding sequences (located on chromosome 1) of a human kinase protein that is related to the myosin light chain kinase subfamily. The human kinase DNA and protein sequences of the invention are useful for identifying agents that modulate the activity of the human kinase protein. Kinase-modulating agents are useful for treating a disease or condition mediated by a human kinase protein. The human kinase DNA sequences can be used to produce transgenic animals which are useful for studying the function of kinase proteins and identifying/evaluating modulators of kinase protein activity. The present DNA sequence encodes the human kinase protein of the invention
  120

   The invention comprises the amino acid and coding sequences (located on chromosome 1) of a human kinase protein that is related to the myosin light chain kinase subfamily. The human kinase DNA and protein sequences of the invention are useful for identifying agents that modulate the activity of the human kinase protein. Kinase-modulating agents are useful for treating a disease or condition mediated by a human kinase protein. The human kinase DNA sequences can be used to produce transgenic animals which are useful for studying the function of kinase proteins and identifying/evaluating modulators of kinase protein activity. The present DNA sequence encodes the human kinase protein of the invention

   The present sequence encodes a splice variant of human in signal transduction polypeptide. The polypeptide is designated H19G5. The protein is capable of regulating signal transduction and exhibits kinase activity. The H19G5 transcript is expressed in the heart. H19G5 polypeptides and polynucleotides are useful for preventing or treating a cardiam disease, such as congestive heart failure, dilated congestive mitral valve disease, acrticophic cardiomyopathy, restrictive cardiomyopathy, angula pectoris, acrtic valve disease or tricuppid valve disease, acrtic valve disease or tricuppid valve disease, arterial infarction, cardiac arrhythmia, pulmonary, arterial or rhenovascular hypertension, arteriosclerosis and cardiac tumours in humans. The polypeptide is also useful for detecting the expression of a protein capable of regulating signal

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.

This invention relates to a novel isolated NOVX polypeptide comprising a fully defined sequence of, a mature form, one or more conservative substitutions or at least 95% identity to 247 amino acids as given in the specification. The invention may be useful for the development of compounds with a cytostatic, antidiabetic, anorectic, creebroprotective, neuroprotective, antildiametory, thyromimetic or cardinat activity. In addition, the disclosed sequences may prove useful for gene-therapy or antisense-therapy. The invention may be useful for the diagnosis and treatment of disorders associated with aberrant expression or activity of the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine, CNS, cardiovascular and inflammatory disorders. They can also be used in various edetection and screening assays, chromosome mapping, tissue typing and predictive medicine. The present sequence is that of a gene which encodes a human NOVX protein of the invention.

diagnosis of diseases they encode may be used in the treatment and diseases associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigosis in the production of antibodies of kinase expression and activity. Anti-kinase antibodies and kinase antagonists may also be used to down regulate kinase activity include rheumatoid arthritis, atherosclerosis, autoimmune disorders, complications of organ transplantation, myocardial infarction, immune disorders, complications of organ transplantation, myocardial infarction, inmune disorders, chronic inflammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, psoriasis, rhinitis, autoimmunity, diabetes, cancers and reproductive
  Nucleic acids encoding kinase polypeptides, useful for diagnosing and treating immune-related diseases and disorders, cardiovascular disease, neurodegenerative diseases and/or cancers.
   present sequence encodes a novel protein kinase. The nucleic acids

```
The invention relates to an isolated human serine/threonine or protein kinase, 59079 or 12599 polypeptide, encoded by nucleic acidd molecule comprising at least 85% identify to the nucleic acidd appearing as ABX11641 and ABX11642 or their complement, a naturally occurring variant of the kinases or their fragments. Also included are a non-human host cell containing the nucleic acids, an antibody specific for the proteins, identifying a compound which binds to the kinase (by contacting the cell expressing the kinase with a test compound and modulating the activity of kinase using the identified compound and modulating the activity of kinase binds to the test compound and modulating the activity of kinase using the identified compound. The kinases and their encoding nucleic acids are useful as adagnostic and therapeutic the activity of kinase binds to the associated with an aberrant of unwanted 59079 or 12599 activity in a subject, includial infarction, ardiovascular diseases or condition associated with an aberrant or unwanted 59079 or 12599 activity in a subject, includial infarction, disorders involving blood vessels such as atherosclerosis, and Kaposi's sarcoma; blood platelets disorder such as thrombocycopeania, leukaemia, Hodgkin's disease, heemolytic ansenia; cellular proliferative disorders are included in the specification). The kinases, their encoding nucleic acids and antibodies are useful in screening assays, centeding and assays, prognostic assays, and monitoring clinical trials and pharmacogenomics). The kinases and their encoding nucleic acids are useful as query sequences to perform a search against public databases to dentify other family members or related sequences. The present sequence

  This invention relates to the cDNA sequences encoding an isolated novel human polypeptide. The protein encoded by the nucleic acid of the invention is useful for treating central and peripheral nervous system diseases (e.g. peripheral neuropathy, Huntington's disease, amyotrophic lateral sclerosis); neurodegenerative diseases (e.g. parkinson's disease, Alzheimer's disease); autoimmune disease (e.g. systemic lupus erythematosus, rheumatoid arthritis, insulin-dependent diabetes mellitus)

  The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples and comparing the expression in the first soft tissue samples indicates the presence of soft tissue sarcoma. The method of the invention has cytosteric applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated by the invention: The urrent sequence is not shown within the specification per se but was submitted in CD format by the inventor.

i wyeloid or lymphoid cell disorders (e.g. anaemia and thrombocytopaenia)

j wounds, ulcers, burns; bone disorders (e.g. osteoporosis,
costeoarthritis); mechanical and traumatic disorders (e.g. stroke, head
trauma); lung or liver fibrosis; reperfusion injury in various tissues;
bacterial, viral or fungal infections; allergic conditions such as
allergic rhinitis, asthma; coagulation disorders (e.g. haemophilia);
cancer and tumours; and infammatory diseases (e.g. septic shock, Crohn's
disease, anaphylaxis). The protein may be used to inhibit the growth,
infection or function of infectious agents such as bacteria, fungi,
viruses, or to effect bodily characteristics, biorhythms or circadian
cycles of rhythms. The protein may also have
proliferation/differentiation, stem cell growth factor, haematopoissis
regulation, immune stimulating or suppressing, chemotactic/chemokinetic,
haemostatic and thrombolytic, receptor/ligand, and antiinflammatory
activities. The cDNA sequences of the invention are useful for expressing
recombinant protein for analysis. The present sequence represents a novel
human cDNA sequence of the invention, this sequence is an expressed
sequence tag (EST) and was identified using subtractive hybridisation

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to muclaic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; and methods of polymucleotides or polypeptides of the invention, and methods of invention further discloses methods to peventing, treating or ameliorating a medical condition; kits comprising polymucleotide probes and/or monoclonal antibodies for carrying out the methods of the and/or modulate the expression or activity of the polymucleotide and/or polypeptide; and 767 conting sequences corresponding to the cDNA sequences of the invention

(ADC31861-ADC32627) and the polypeptides encoded by the contigs (ADC32628 -ADC33394). The nucleic acids and polypeptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the identification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are also used for treating diseases uch as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human cDNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

  This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to cDNA clones obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well as articolies, antisense molecules and siRNAs that can all be used to bind to and modulate expression of the CDNA molecules. As such, these concludes are useful for diagnostic markers or therapeutic targets for the various diseases or morbid states. In particular, they are useful in gene therapy for treating osteoporosis, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers, cor relating equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly, they exhibit osteopathic, neuropotective, nootropic, antiparkinsonian, cytostatic and tranquiliser activities. This polymucleotide is a full length human cDNA sequence of the invention. NOTE: This sequence is not given in the sequence listing of the specification but can be obtained on constitution of the specification but can be obtained on constitution and constitutions. Wienna Sub-office.

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAV38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
  Wang D;
Zhao QA;
  system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form
  nucleic acids and polypeptides, useful for treating disorders such

  GACCCCCGAGAACATGTGTTCGTGCCATACTTCCGAGTGTGTCATGCTGCCTGT 1995
   The present invention describes nucleic acids (I) associated with bladder cancer tissue. Also described: (1) peptides and proteins (II) containing an amino acid sequence encoded by (I); (2) a method for diagnosing bladder cancer (BC), or monitoring its progression, that uses (I), (II) or agents (Z) that inhibit, or bind to, (I) or (II), labelled with a reporter; and (3) a method for treating BC that uses (I), (II) or (Z). (I) and (II) have cytostatic activity. (I) and (II) can be used to detect (and monitor progression of) bladder cancer (BC), or the risk of developing it; to screen for specific binding agents (Z), and to treat BC. (Z) are also useful as diagnostic and herapeutic agents. The present sequence represents a human nucleocide sequence associated with bladder cancer, which is used in the exemplification of the present invention.

   New polynucleotides and polypeptides for predicting the activity of compounds that interact with protein tyrosine kinases and/or protein
   protein tyrosine kinase pathways. These may be used in determining sensitivity in patients to allow the development of individualized genetic profiles which aid in treating diseases and disorders (e.g. cancer) based on patient response at a molecular level. The present sequence is used in the exemplification of the present invention.

   The present invention provides a new isolated protein complex comprising a first protein comprising AW755252 or its homologue or derivative or regiment interacting with a second protein consisting of MFHL2, mPN34854, mPRPH1, mTCTEX.1, ACTN2, mACTN4 and mMRJ, or a homologue or derivative or fragment. The protein complex is useful for preparing a composition for treating diseases e.g., ischaemic heart disease, myocardial infarction, cardiac failure, dilated cardiomyopathy, hypertrophia cordis or angina pectoris. The present sequence is the coding sequence of the mPN34854 protein, which interacts with the AM755252 protein.

in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous focalised neuropathies and central nervous system diseases, such as Alzheimer's Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and thrombolytic objectivity, arthritis and inflammation, leukaemias and CNNS disorders. Note: The sequence data for this patent did not form

   The present invention relates to 26 secreted human proteins. The preceins may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. For example, they may be used in gene therapy or in vaccines. Typical of diseases which are potentially treatable are cancers (including leukemia), autoimmune diseases, allergies, inflammation, graft rejection, hyperproliferation, cardiovascular diseases (particularly critical limb ischemia and coronary

   The invention relates to polymucleotides encoding interleukin 1 receptor related protein 3 (IL-IRRE3) or variants. The polymucleotides are used to diagnose a disease or susceptibility to a disease in a subject related to expression or activity of the IL-IRRP3 to screen for compounds which expimalate or inhibit the function of IL-IRRP3 or to treat a subject in need of enhanced or inhibited ILIRRP3 activity. Specifically mentioned in the specification is the use of the IL-3RRP3 polymucleotide or

   The invention relates to polynucleotides encoding interleukin I receptor related protein 3 (IL-IRRP3) or variants. The polynucleotides are used to diagnose a disease or susceptibility to a disease in a subject related to expression or activity of the IL-IRRP3 to screen for compounds which stimulate or inhibit the function of IL-IRRP3 or to treat a subject in need of enhanced or inhibit ten use of the IL-IRRP3 polynucleotide or the specification is the use of the IL-IRRP3 polynucleotide or polypeptide for treatment of chronic and acute inflammation, arthritis, septicaemia, autoimmune disease, transplant rejection, graft-versus-host disease, infection, stroke, ischaemia, acute respiratory disease syndrome, restenosis, brain injury, AIDS, bone diseases e.g. osteoporosis, cancer, atheroscalerosis and Alzheimer's disease. The present sequence is that of a human IL-IRRP3 encoding CDNA of the

```
The invention relates to 2175 novel human ovarian antigens (ABB41054-ABB43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 104 identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polynucleotides against human ovarian antigen polynucleotides and polypeptides in diagnosing, creambinant vectors antibodies against human ovarian antigen polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast cancer, and disorders (e.g., infertility, disorders of pregnancy, anovulation, polycystic ovary syndrome, ovarian or ysts, and dysmenorrhoes), endocrine disorders (e.g., infertility, disorders, and dysmenorrhoes), and toxic shock syndrome), inflammatory conditions (e.g., mastitis, cophoritis and vaginitis), immune disorders (e.g., congenital and acquired indocrders) immune disorders (e.g., anaemia), cardiovascular disorders, capiratory disorders, neurological disorders, gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and copymenticies may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may be used for gene therapy, chromosome mapping, in the columniant payentides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may be used a food additives or to prepare antibodies cusculant disease diagnosis, drug targeting and phenotyping the present constitution of indisease diagnosis, drug targeting and phenotyping. The present sequence represents and and presents antibodies ovarian antigen constitution and phenotyping of the present sequence over the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the present of the presen
  Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological
   invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.

GTGGATGCCGGGGAGTACTCGTGTGTGTGCGGGCAGGAGAGCCTCAGCCACACATCACT 11459
   The invention relates to an isolated human serine/threonine or protein comprising at least 85 identity to the nucleic acids appearing as ABX11641 and ABX11642 or their complement, a naturally occurring varient of the kinases or their fragments. Also included are a non-human host cell containing the nucleic acids, a antibody specific for the proteins, identifying a compound which binds to the kinase (by contacting the kinase or a cell expressing the kinase with a test compound and determining whether the kinase binds to the test compound and the activity of kinase using the identified compound. The kinases and their encoding nucleic acids are useful as diagnostic and therapeutic
   Human; 88; gene; serine/threonine kinase; protein kinase; 12599; cardiovascular disease; heart failure; myocardial infarction; blood vessel disorder; atherosclerosis; Kaposi's sarcoma; blood platelet disorder; thrombocytopaenia, leukaemia; Hodgkin's disease; haemolytic anaemia; cellular proliferative disorder; cancer; protein kinase disorder; antoliferative disorder; cancer; protein kinase disorder; autoliferatimune disorder; diabetes mellitus; psoriasis; inflammatory bowel disease; rheumatoid arthritis;
   Novel isolated human protein kinase, designated 59079 or 12599 polypeptide, useful as diagnostic and therapeutic agents for preventing cardiovascular diseases, proliferative disorders, and protein kinase
/procedure in this CDS is specifically claimed in claim 23979. .24120 /*tag= c

  ð
cardiovascular disease or condition associated with an aberrant or unwanted 59079 or 12599 activity in a subject, including cardiovascular diseases such as heart failure, and myocardial infarction, disorders involving blood vessels ench as atheroscierosis, and Kaposi's sarcoma; blood platelets disorder such as thrombocytopaenia, leukaemia, Hodgkin's disease, haemolyvic anaemia; cellular proliferative disorders such as cancer, and protein kinase disorders such as cancer, and protein kinase disorders inflammatory bowel disease, rheumatoid arthritis, and multiple sclerosis (many examples of diseases, rheumatoid arthritis, and multiple sclerosis (many examples of diseases, and disorders are included in the specification). The kinases, their encoding nucleic acids and antibodies are useful in screening assays, detection assays (e.g. forensic biology), and predictive medicine (e.g. diagnostic assays, prognostic assays, and monitoring clinical trials and useful as query sequences to perform a search adainst public databases to identify other family members or related sequences. The present sequence

  The present sequence is that of Incyte clone 7326129CB1 cDNA encoding human cell adhesion and extracellular matrix protein 4 (CADECM-4). A representative cDNA library for the full-length polynuclectide is (CADECM-4). A representative constructed from the muscle tissue RNA of a Caucasian adult man. Homology data suggest the encoded protein to a titin muscle protein. The invention provides CADECM-1 to -11 polypeptides (see ABP58224-34) and copynuclectides (see ABZ24578-88), expression vectors, host cells, attibodies, agonists and antagonists. These are useful for diagnosing, creating or preventing disorders associated with aberrant expression of attibodies, agonists and antagonists. These are useful for diagnosing, creating or preventing disorders associated with aberrant expression of atherosclerosis, cirrhosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythemia vera, psoriasis, primary thromobocytopaenia or cancer), developmental disorders (e.g. renal cutoimmus/inflammatory disorders (e.g. Alzeimer's disease, Parkinson's disease, or epilepsy, reproductive disorders (e.g. infertility or a disruption in the menstrual cycle), or autoimmus/inflammatory disorders (e.g. ALDS, allergy, asthma, autoimmune throughtitis, Goodpasture's syndrome, gout, Graves' disease, Hashimoto's thyroiditis, irritable bowel syndrome, multiple sclerosis, osteoarthritis, Slogren's syndrome, uverline, parterial, fungal, carbritis, Slogren's syndrome, uverline, or viral, bacterial, fungal, carbritis, Slogren's syndrome, uverline.

   The present invention relates to new isolated proteins (NOVX) and their coding sequences (ABY99327-ABV99595 and ABP70049-ABR970149), where X is any number from 1 to 48. The NOVX proteins and coding sequences are useful in the manufacture of a medicament for treating a syndrome
  New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders e.g. diabetes, cancer, Alzheimer's disease, dyslipidemias, obesity, immune or hematopoietic

## WPI; 2002-732824/79. P-PSDB; ABP70084.

New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders e.g. diabetes, cancer, Alzheimer's disease, dyslipidemias, obesity, immune or hematopoietic disorders, and asthma.

## Claim 16; Page 133-137; 619pp; English.

The present invention relates to new isolated proteins (NOVX) and their coding sequences (ABV99327-ABV99595 and ABP70049-ABP70149), where X is any number from 1 to 48. The NOVX proteins and coding sequences are useful in the manufacture of a medicament for treating sequences are useful in the manufacture of a medicament for treating a syndrome associated with a human disease, preferably a NOVX-associated disorder. The NOVX coding sequences and proteins are useful for treating, preventing or disgnosing diseases and proteins are useful for treating, preventing or disorders, cancer-associated cachexia, conser, neurodegenerative diseases, Alzheimer's disease, Parkinson's disease, immune disorders, heematopoletic disorders, cardiovascular disorders, fertility, bronchial asthma, AlDS, dyslipidemia, metabolic disorders, especiated with obesity, metabolic syndrome X or wasting disorders associated with obesity, metabolic syndrome X or wasting disorders associated with fironic diseases or various cancers. The NOVX coding sequences and proteins may also be used as targets for the identification of small molecules that modulate or inhibit e.g.

The present sequence is one of 3351 sequences in a library of human polymucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies to the polymucleotides. The probes can be used for chromosome mapping of the polymucleotides and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polymucleotides and for detection of transcription levels and the polymucleotides are used as generated. The polymucleotides and lood or Lissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and antibodies against them can be used in pharmaceutical compositions to treat the cancers and proliferative disorders such as neoplasia,

   The invention relates to 446 newly isolated polynucleotide sequences. The activity of polynucleotides of the invention may be described as, vulnerary, neuroprotective, immunomodulator, cytostatic and anti-inflammatory. Compositions comprising nucleic acids of the invention are useful for treating a mammalian subject, or as nutritional sources or supplements. These are useful in gene therapy, particularly for treating wounds, burns or ulcers, Alzheimer's disease, Huntington's disease, amyotrophic lateral sclerosis, autoimmune disorders, cancer or inflammation. The nucleic acids and polypeptides are also useful in diagnostic and research methods. The sequences given in records ABQ60788-ABQ61233 represent polynucleotides of the invention. NOTE: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

The invention describes an isolated polypeptide chosen from secreted proteins (I), SECP 1-54. (I) and the polynucleotide encoding it (II) are useful for screening a compound for effectiveness as an agonist or useful for screening a compound for alters expression of (II). (I), the identified agonist and antagonist are useful for treating a disease or condition associated alterace expression of functional SECP in a patient.

Condition associated alterace expression of functional SECP in a patient.

Condition sample and for diagnosing a condition or disease associated with expression of SECP in a subject or in a biological associated with expression of SECP in a subject or in a biological associated with expression of SECP in a subject or in a biological cample (I) and modulators of (I) are useful for diagnosis, treatment and prevention of cell proliferative disorders (e.g. cancer, keratosis, arterisoclarosis, atherosoclarosis, autoimmune (III) and modulatory disorders (e.g. acquired immune/inflammatory disorders (e.g. acquired immune/inflammatory disorders (e.g. acquired immunodeficiency syndrome (AIDS), adult respiratory distress syndrome, pooriasis), autoimmune (AIDS), adult respiratory distress syndrome, conditions, autoimmune (AIDS), adult respiratory distress syndrome, thyroiditis, crohn's disease, darmatitis, haemodalalysis, vetils; viral, bacterial, fungal, parasitic, prococoal, helminthic infections and traumal), cardiovascular disorders (e.g. congestive heart failure, angina, conferensive heart disease, multiple sclerosis, dementia, neuromuscular disorders, metabolic, endocrine and toxic myopathies, mental disorders, estroke, Huntington's disease, multiple sclerosis, emetal disorders, estroke, Huntington's disease, multiple sclerosis, emetal disorders, estile sequence conference and quantify gene expression in biopsied tissues in which expression of SECP is correcting dispersery. This sequence a human secreted protein (SCEP)

  The invention relates to a novel human polynucleotide and the encoded polypeptide. A polynucleotide of the invention may have a use in gene therapy. An oligonucleotide of the invention ADM06202-ADM06733 is useful as a primer for synthesizing the polynucleotide or as a probe for useful in gene therapy, for developing a diagnostic marker or medicines for regulating their expression and activity, or as a target of gene therapy. The proteins advantage of gene therapy. The proteins ADM0359-ADM06201 encoded by the polynucleotides are useful as pharmaceutical asgents. The present sequence represents a cDNA sequence of the invention.

  The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABNIS762 to ABNZ752 encode the human ORFX proteins given in ABP00010 to ABPI1500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating syndrome associated with ORFX-associated disorder. ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of canner, hypothypolificrative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, haemoringe, osteoarthritis, neurodegenerative disorders, disorders related to organ

The present invention describes oligonucleotide libraries for detecting messenger RNAs that populate a (sub-)transcriptome, where the (sub-)transcriptome comprises messenger RNAs transcribtome, units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of which encodes one or more messenger KNAs transcription unit of the genome, which encodes one more messenger KNA splice variants. The genome, oligonucleotide libraries are useful for detecting mRNAs from a

Example 1; SEQ ID NO 13516; 47pp; English.

biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in detecting RNA transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised mini libraries to detect transcripts of a sub-transcriptome under a particular biological or pathological state, and so allowing the detection of tissue

  This invention describes a novel method for screening compounds for their ability to regulate the activity and expression of human RGS11 and its partial peptides and salles, by observing the expression or activity of RGS11 in the presence or absence of the test compound. The products of the invention have cardiant and antianginal activity and can be used for gene therapy. The methods and compositions are useful in the prevention, treatment and diagnosis of heart disorders such as cardiac ischaemia, heart failure and angina. This sequence encodes the human RGS11 protein described in the disclosure of the invention
  and pathology-specific genes such as those genes only expressed in specific tissue under a specific pathological condition; to detect developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular disorder. ABN27253 to ABN59589 represent oligonucleotide sequences from rats, humans and mice, which are used in the exemplification of the present invention. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Acton SL; (MILL-) MILLENNIUM PHARM INC Kapeller-Libermann R, WPI; 2003-298729/29. N-PSDB; ABX11642. Novel isolated human protein kinase, designated 59079 or 12599 polypeptide, useful as diagnostic and therapeutic agents for preventing cardiovascular diseases, proliferative disorders, and protein kinase disorders.

Claim 8; Page 84-104; 119pp; English.

The invention relates to an isolated human serine/threonine or protein kinase, 59079 or 12559 polypeptide, encoded by nucleic acid molecule comprising at least 85% identity to the nucleic acide appearing as ABX11641 and ABX11642 or their complement, a naturally occurring variant of the kinases or their fragments. Also included are a non-human host

cell containing the nucleic acids, an antibody specific for the proteins, identifying a compound which binds to the kinase (by contacting the kinase or a cell expressing the kinase with a test compound and cetermining whether the kinase binds to the test compound and modulating the activity of kinase using the identified compound. The kinases and their encoding nucleic acids are useful as diagnostic and therapeutic against for preventing a disease or condition associated with an aberrant or unwanted 59079 or 12599 activity in a subject, including cardiovascular diseases such as heart failure, and myocardial infarction; cardiovascular diseases such as heart failure, and myocardial infarction; cardiovascular diseases such as thrombocytopaenia, leukaemia, elodgkin's disease, haemolytic anaemia; cellular proliferative disorders such as autoimmne could arthritis, and multiple sclerosis (many examples of diseases) rheumatoid arthritis, and multiple sclerosis (many examples of diseases or and disorders are included in the specification). The kinases such as autoimmne conding nucleic acids and antibodies are useful in screening assays, cenceding nucleic acids and antibodies are useful in screening assays, detection assays (e.g. forensic biology), and predictive medicine (e.g. diagnostic assays, and monitoring clinical trials and pharmacogenomics). The kinases and their encoding nucleic acids are confirmed assays, and monitoring clinical trials and pharmacogenomics). The kinases and their encoding nucleic acids are confirmed assays, and monitoring clinical trials and conferent and their encoding nucleic acids are confirmed assays. The reconstruction assays to perform a search against public databases to confirme the confirmed as query sequences to perform a search against public databases to dentify dependents. ö 180 240 300 360 360 420 420 480 480 9 9 CKQSDRGLYTCTASNLVGQTYSSVLVVVREPAVPFKKRLQDLEVREKESATFLCEVPQPS MDQPQFSGAPRFLTRPKAFVVSVGKDATLSCQIVGNPTPQVSWEKDQQPVTAGARFRLAQ MDQPQFSGAPRFLTRPKAFVVSVGKDATLSCQIVGNPTPQVSWEKDQQPVTAGARFRLAQ DGDLYRLTILDLALGDSGQYVCRARNAIGEAFAAVGLQVDAEAACAEQAPHFLLRPTSIR VREGSEATFRCRVGGS PRPAVSWSKDGRRLGEPDGPRVRVEELGEASALRIRAARPRDGG VREGSEATFRCRVGGSPRPAVSWSKDGRRLGEPDGPRVRVEELGEASALRIRAARPRDGG TYEVRAENPLGAASAAAALVVDSDAADTASRPGTSTAALLAHLQRRREAMRAEGAPASPP STGTRICTVTEGKHARLSCYVTGEPKPETVWKKDGQLVTEGRRHVVYEDAQENFVLKILF CKQSDRGLYTCTASNLVGQTYSSVLVVVREPAVPFKKRLQDLEVREKESATFLCEVPQPS TEAAWFKEETRLWASAKYGI EEEGTERRLTVRNVSADDDAVYI CETPEGSRTVAELAVQG NLERKLPRKTAVRVGDTAMFCVELAVPVGPVHWLRNQEBVVAGGRVAISAEGTRHTLTIS NLLRKLPRKTAVRVGDTAMFCVELAVPVGPVHWLRNQEEVVAGGRVAISAEGTRHTLTIS **QCCLEDVGQVAFMAGDCQTSTRFCVSAPRKPPLQPPVDPVVKARMESSVILSWSPPHGE** Gaps ö Length 7968; Indels . 9 ..    This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, ostecarthritis, Leber's hereditary optic neuropathy (LHGN), mitochondrial concephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy compositions have neuroprotective, nootropic, anticiabetic, anticonvulsant, antiarthritic, ostecopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart control of the invention.

Comprising at least 9st identify to the nucleic acids appearing as comprising at least 9st identify to the nucleic acids an antibody specific for the proteins, cell containing the nucleic acids, an antibody specific for the proteins, dentifying a compound which binds to the kinase (by contacting the identifying a compound which binds to the kinase (by contacting the identifying a compound which binds to the test compound and modulating the activity of kinase using the identified compound. The kinase and cother test compound and modulating their encoding nucleic acids are useful as diagnostic and therapeutic to their encoding nucleic acids are useful as diagnostic and therapeutic commanted 50079 or 12599 activity in a subject, including cardiovascular diseases such as thrombocytopaenia, leukaemia, cor unwanted 50079 or 12599 activity in a subject, including cardiovascular diseases such as thrombocytopaenia, leukaemia, cor unwanted incomplying blood vessels such as athrombocytopaenia, leukaemia, disorders involving blood vessels such as athrombocytopaenia, leukaemia, cor such as cancer, and protein kinase disorders such as autoimmne cor disorders are included in the specification). The kinases, their canceding nucleic acids and antibodies are useful in screening assays, cerconing nucleic acids and antibodies are useful in screening assays, conding nucleic acids and antibodies are useful in screening assays, check conding nucleic acids and antibodies are useful in screening assays, conding nucleic acids and their encoding nucleic acids and their encoding nucleic acids and their encoding nucleic acids and control assays, prognostic assays, and monitoring clinical trials and pharmacogenomics). The kinases and their encoding nucleic acids and their encoding nucleic acids and their encoding nucleic acids and their encoding nucleic acids and their encoding nucleic acids and their encoding nucleic acids and their encoding nucleic acids and their encoding nucleic acids and their encoding nucleic acids and their encoding 
Novel isolated human protein kinase, designated 59079 or 12599 polypeptide, useful as diagnostic and therapeutic agents for preventing cardiovascular diseases, proliferative disorders, and protein kinase
   The invention relates to an isolated human serine/threonine or protein kinase, 59079 or 12599 polypeptide, encoded by nucleic acid molecule comprising at least 85% identity to the nucleic acids appearing as

  The present sequence represents a splice variant of human in signal transduction polypeptide. The polypeptide is designated H19G5. The protein is capable of regulating signal transduction and exhibits kinase activity. The H19G5 transcript is expressed in the heart. H19G5 polypeptides and polymucleotides are useful for preventing or treating a cardiac disease, such as congestive heart failure, dilated congestive cardiamyopathy, hypertrophic cardiamyopathy, restrictive cardiamyopathy, mitral valve disease, aortic valve disease or tricuspid valve disease, angina pectoris, myocardial infarction, arteriosclerosis, atherosclerosis and cardiac tumours in humans. The polypeptide is also useful for detecting the expression of a protein capable of regulating signal transduction or the expression of a protein capable of acting as a donor or acceptor molecule of a phosphate group. The monoclonal antibodies can be accepted to the capable of acting as a donor or acceptor molecule of a phosphate group. The monoclonal antibodies can be accepted the capable of acting as a donor or acceptor molecule of a phosphate group. The monoclonal antibodies can accepte the capable of acting as a capable of acting an acting an acting an acting an acting an acting an acting acting an acting an acting an acting an acting an acting an acting an acting an acting an acting acting an acting an acting acting an acting acting an acting acting acting an acting acting an acting acting acting acting acting acting acting acting acting acapable acting acting acting acting acting acting acting acting ac
  tissue or
   Novel h19G5 polypeptides capable of regulating signal transduction and exhibiting kinase activity useful for identifying antibodies to treat cardisc diseases, and additional mediators of signal transduction.
   Signal transduction; H19G5; kinase; cardiac disease; angina pectoris; congestive heart failure; dilated congestive cardiomyopathy; hypertrophic cardiomyopathy; restrictive cardiomyopathy; hypertension; mitral valve disease; artic valve disease; myocardial infarction; cardiac arthythmia; arteriosclerosis; atherosclerosis; cardiac tumour; microbial infection; splice variant.
   exchange factor domain"
  used as probes for detecting discrete antigens expressed by t
1 samples, and therefore used in humans for localization and
litoring of microbial infection
   A splice variant of a signal transduction polypeptide

New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders e.g. diabetes, cancer, Alzheimer's disease, dyslipidemias, obesity, immune or hematopoietic disorders, and asthma.

## 1; Page 137-138; 619pp; English Claim

The present invention relates to new isolated proteins (NOVX) and their coding sequences (ABY9327-ABV99595 and ABP70049-ABBY0149), where X is any number from 1 to 48. The NOVX proteins and coding sequences are useful in the manufacture of a medicament for treating a syndrome

780

721

The NOVX coding sequences and proteins are useful for treating, preventing or diagnosing diseases such as metabolic disorders, diabetes, obseity, infectious disease, anorexia, cancer\_associated cachexia, cancer, neurodegenerative disease, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, cardiovascular disorders, fertility, bronchial asthma, AIDS, dyslipidemia, metabolic disturbances associated with obseity, metabolic syndrome X or wasting disorders associated with obseity, metabolic syndrome X or wasting disorders associated with chronic diseases or various cancers. The NOVX coding sequences and proteins may also be used as targets for the identification of small molecules that modulate or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of therapeutic or diagnostic methods 2714 2774 3014 3074 3134 3194 3314 3374 120 180 240 540 9 DLSAEERGTLALQCEVSDPEAHVVWRKDGVQLGPSDKYDFLHTAGTRGLVVHDVSPEDAG EYTCEVEASKSTASLHVEEKANCFTEELTNLQVEEKGTAVFTCKTEHPAATVTWRKGLLE 541 LRGSARCQLSHEGHRAQLLITGATLQDSGRYKCEAGGACSSSIVRVHARPVRFQEALKDL DLSAEERGTLALQCEVSDPEAHVVWRKDGVQLGPSDKYDFLHTAGTRGLVVHDVSPEDAG LYTCHVGSEETRARVRVHDLHVGITKRLKTMEVLEGESCSFECVLSHESASDPAMWTVGG KTVGSSSRFQATRQGRKYILVVREAAPSDAGEVVFSVRGLTSKASLIVRERPAAIIKPLE DOWVAPGEDVELRCELSRAGTPVHWLKDRKAIRKSOKYDVVCEGTMAMLVIRGASLKDAG **EYTCEVEASKSTASLHVEEKANCFTEELTNLQVEEKGTAVFTCKTEHPAATVTWRKGLLE** DVQEGSSATFRCR1SPANYEPVHWFLDKTPLHANELNE1DAQPGGYHVLTLRQLALKDSG 421 DVQEGSSATFRCRISPANYEPVHWFLDKTPLHANELNBIDAQPGGYHVLTLRQLALKDSG TIYFEAGDQRASAALRVTEKPSVFSRELTDATITEGEDLTLVCETSTCDIPMCWTKDGKT LRGSARCQLSHEGHRAQLLITGATLQDSGRYKCEAGGACSSSIVRVHARPVRFQEALKDL EVLEGGAATLRCVLSSVAAPVKWCYGNNVLRPGDKYSLRQEGAMLELVVRNLRPQDSGRY EVLEGGAATLRCVLSSVAAPVKMCYGNNVLRPGDKYSLRQEGAMLELVVRNLRPQDSGRY SCSFGDQTTSATLTVTALPAQFIGKLRNKEATEGATATLRCELSKTAPVEWRKGSETLRD SCSFGDQTTSATLIVTALPAQFIGKLRNKEATEGATATLRCELSKAAPVEWRKGSETLRD GDRYCLRQDGAMCELQIRGLAMVDAAEYSCVCGEERTSASLTIRPMPAHFIGRLRHQESI GDRYCLRQDGAMCELQIRGLAMVDAAEXSCVCGEERTSASLTIRPMPAHFIGRLRHQESI MPLYNDSFHEISHKGRRHTLVLKSIQRADAGIVRASSLKVSTSARLEVRVKPVVFLKALD MPLYNDSFHEISHKGRRHTLVLKSIQRADAGIVRASSLKVSTSARLEVRVKPVVPLKALD Aatches 2367; Conservative 118; Mismatches 342; Indels 1807; Gaps Length 4691; NOVX-associated .. WPI; 2002-732824/79

The present invention relates to new isolated proteins (NOVX) and their coding sequences (ABV99327-ABV99595 and ABP70049-ABP70149), where X is any number from 1 to 48. The NOVX proteins and coding sequences are useful in the manufacture of a medicament for treating asyndrome associated with a human disease, preferably a NOVX-associated disorder. The NOVX coding sequences and proteins are useful for treating, preventing or diagnosing diseases, anorexia, cancer-associated cachexia, cancer, neurodegenerative diseases, Alzheimer's disease, Parkinson's disorders, fertility, bronchial asthma, AlDS, dyslipidemia, metabolic disorders, effectility, bronchial asthma, AlDS, dyslipidemia, metabolic disorders associated with obesity, metabolic syndrome X or wasting disorders associated with obesity, metabolic syndrome X or wasting ciscular associated with chronic diseases or various cancers. The NOVX coding sequences and proteins may also be used as targets for the identification of small molecules that modulace or inhibit e.g. neurogenesis, cell differentiation, cell proliferation, haematopoiesis, wound healing and angiogenesis, in gene therapy, in generation of antibodies that bind immunospecifically to NOVX substances for use in the property or disances for use in the papeutic or diagnostic methods 2835 DQWVAPGEDVELKCELSRAGTPVHWLXDRKAIRKSQKYDVVCEGTMAMLVIRGASLKDAG 2894 3014 2595 MPLYNDSFHEISHKGRRHTLVLKSIQRADAGIVRASSLKVSTSARLEVRVKPVVFLKALD 2654 2655 DLSAEERGTLALQCEVSDPEAHVVWRKDGVQLGPSDKYDFLHTAGTRGLVVHDVSPEDAG 2714 2715 LYTCHVGSEETRARVRVHDLHVGITKRLKTMEVLEGESCSFECVLSHESASDPAMWTVGG 2774 2775 KTVGSSSRFQATRQGRKYILVVREAAPSDAGEVVFSVRGLTSKASLIVRERPAAIIKPLE 2834 241 DQWVAPGEDVELRCELSRAGTPVHWLKDRKAIRKSQKYDVVCEGTWAMLVIRGASLKDAG 300 New NOVX polypeptides and polynucleotides, useful for preventing, diagnosing or treating NOVX-associated disorders e.g. diabetes, cancer, Alzheimer's disease, dyslipidemias, obesity, immune or hematopoietic DLSAEERGTLALQCEVSDPEAHVVWRKDGVQLGPSDKYDFLHTAGTRGLVVHDVSPEDAG 121 LYTCHVGSEETRARVRVHDLHVGITKRLKTMEVLEGESCSFECVLSHESASDPAMMTVGG 181 KTVGSSSRFQATRQCRKYILVVREAAPSDAGEVVFSVRGLTSKASLIVRERPAAIIKPLE **EYTCEVEASKSTASIHVEEKANCFTEELTINLQVEEKGTAVFTCKTEHPAATVTWRKGLLE** Query Match 25.5%; Score 10506; DB 5; Length 4675; Best Local Similarity 56.1%; Pred. New human cell adhesion and extracellular matrix proteins, useful for diagnosing, treating or preventing autoimmune or inflammatory disorder (e.g. AIDS, allergy or anemia), multiple sclerosis, osteoarthritis, XX XX  Cancer or hepatitis. XX  Claim 1; Page 144-150; 178pp; English.	The present sequence is the protein sequence of Incyte polypeptide (C 7326129CD1 denoted human cell adhesion and extracellular matrix protein 4 (C7BECM-4). The protein is encoded by a clone isolated from a male muscle cC (CADECM-4). The protein is encoded from a male muscle muscle cDNA library. Homology searches indicate it to be a titin muscle protein. CC The invention provides (CADECM-1 to -11 polypeptides (see ABP58224-34) and CC polymucleorides (see ABZ64578-88), expression vectors, host cells, antibodies, agonists and antagonists. These are useful for diagnosing, creating or preventing disorders associated with aberrant expression of CC CADECM, particularly cell proliferative disorders (e.g. arteriosclerosis,

activity of the human kinase protein. Kinase-modulating agents are useful for treating a disease or condition mediated by a human kinase protein. The human kinase DNA sequences can be used to produce transgenic animals which are useful for studying the function of kinase proteins and identifying/evaluating modulators of kinase protein activity. The present amino acid sequence represents the human kinase protein of the invention

The invention provides human protein kinases and protein kinase-like enzymes and polynucleotides encoding the polypeptides. The kinase polypeptides and their modulators are useful for treating a disease or disorder such as cancers of the matopoletic origin, diseases of the cancers of hematopoletic origin, diseases of the cancers of hematopoletic origin, diseases of the cancers of the peripheral nervous system, diseases of the peripheral nervous system, assesses of the peripheral nervous system, diseases, parkinson's disease, multiple sclerosis, amyotrophic leteral and fund; ocular disease, migraines, pain, sexual dysfunction, mood disorders, attention disorders, condition disorders, hypotenaion, psychotic disorders, neurological disorders, dyskinesias, metabolic disorders, and organ transplant rejection. They are also useful for treating thinitis, autoimmunity, atherosclerosis, psolvic disorders osteoarthritis, metabolic disorders contenatory bowel disease, rheumatory pelvic disorders and atherosclerosis, such as diabetes, obesity, cardiovascular diseases such as reperfusion injury, coronary thrombols, clotting disorders and atherosclerosis, injury, coronary thromboels, clotting disorders and atheroscierosis, ocular diseases such as glaucoma, retinopathy and macular degeneration, psychiatric and neurological disorders such as anxiety, schizophrenia, dementia, manic depression, etc. The polynucleotides are useful in gene therapy techniques to treat the above mentioned disorders. Sequences AAB85591-85522 represent the human protein kinases of the invention

```
The present sequence represents a human protein with putative function in signal transduction. The polypeptide is designated H1965. The protein is capable of regulating signal transduction and exhibits kinase activity. The H1965 transcript is expressed in the heart. H1965 polypeptides and polymucleotides are useful for preventing or treating a cardiac disease, such as congestive heart failure, dilated congestive cardiomyopathy.

The H1965 transcript is expressed in the heart. H1965 polypeptides and polymucleotides are useful for preventing or treating a cardiac disease, and are according to the cardiomyopathy, mitral valve disease, ancitor valve disease or tricuspid valve disease, and the petoris myocardial infarction, arteriosale archythmia, pulmonary, arterial corresponds and cardiac tumours in humans. The polypeptide is also useful for detecting the expression of a protein capable of regulating signal transduction or the expression of a protein capable of acting as a donor or acceptor molecule of a phosphate group. The monoclonal antibodies can be used as probes for detecting discrete antigens expressed by tissue or cell samples, and therefore used in humans for localization and monitoring of
   congestive heart failure; dilated congestive cardiomyopathy; hypertrophic cardiomyopathy; restrictive cardiomyopathy; hypertrophic cardiomyopathy; restrictive cardiomyopathy; hypertension; mitral valve disease; rricuspid valve disease; myocardial infarction; cardiac arrythmia; arteriosclerosis; atherosclerosis; cardiac tumour; microbial infection.
   transduction; H19G5; kinase; cardiac disease; angina pectoris;
  Novel h19G5 polypeptides capable of regulating signal transduction and exhibiting kinase activity useful for identifying antibodies to treat cardiac diseases, and additional mediators of signal transduction.

   The present sequence represents a human protein with putative function in signal transduction. The polypeptide is designated H19G5. The protein is capable of regulating signal transduction and exhibits kinase activity. The H19G5 transcript is expressed in the heart. H19G5 polypeptides and polynucleotides are useful for preventing or treating a cardiac disease, ench as congestive hart failure, dilated congestive cardiomyopathy, hypertrophic cardiomyopathy. restrictive cardiomyopathy, mitral valve disease, aortic valve disease or tricuspid valve disease, angina
   Signal transduction, H19G5, kinase; cardiac disease; angina pectoris; congestive heart failure; dilated congestive cardiomyopathy; hypertension; hypertrophic cardiomyopathy; restrictive cardiomyopathy; hypertension; mitral valve disease; aortic valve disease; tricuspid valve disease; myocardial infarction; cardiac arrhythmia; arteriosclerosis; atherosclerosis; cardiac tumour; microbial infection.
  Novel h19G5 polypeptides capable of regulating signal transduction and exhibiting kinase activity useful for identifying antibodies to treat cardiac diseases, and additional mediators of signal transduction.

pectoris, myocardial infarction, cardiac arrhythmia, pulmonary, arterial or rhenovascular hypertension, arteriosclerosis, atherosclerosis and cardiac tumours in humans. The polypeptide is also useful for detecting the expression of a protein capable of regulating signal transduction or the expression of a protein capable of acting as a donor or acceptor molecule of a phosphate group. The monoclonal antibodies can be used as probes for detecting discrete antigens expressed by tissue or cell samples, and therefore used in humans for localization and monitoring of

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteome that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various disease associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRP) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, conticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                         Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating

and

treat

Novel h19G5 polypeptides capable of regulating signal transduction exhibiting kinase activity useful for identifying antibodies to tre cardiac diseases, and additional mediators of signal transduction.

Claim 1; Page 74-76; 81pp; English

```
The present sequence represents a splice variant of human in signal transduction polypeptide; as designated H1965. The protein is capable of regulating signal transduction and exhibits kinase activity. The H1965 transcript is expressed in the heart. H1965 activity. The H1965 transcript is expressed in the heart. H1965 cardiac disease, such as congestive heart failure, dilated congestive cardiomyopathy, hypertrophic cardiomyopathy, restrictive cardiomyopathy. Pypertrophic cardiomyopathy, restrictive cardiomyopathy. Contral valve disease, acrtic valve disease or tricupid valve disease, angina pectoris, myocardial infarction, cardiac arrhythmia, pulmonary, arterial or rhenovascular hypertension, arteriosclerosis, atherosclerosis and cardiac tumours in humans. The polypeptide is also useful for detecting the expression of a protein capable of regulating signal transduction or the expression of a protein capable of acting as a donor or acceptor molecule of a phosphate group. The monoclonal antibodies can be used as probes for detecting discrete antigens expressed by tissue or call samples, and therefore used in humans for localization and cardiaction in furning of microbial infection

Domain Domain

```
The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition containing PKIN agonist is useful for treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disorders include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, myeloma, sarcoma, teratocarcinoma, Hodgkin's disease); immune disorder (Aqquired Immune Deficiency Syndrome (AIDS), asthma, Addison's disease, atherosclerosis, anaemia, allergies, adult respiratory distress syndrome, autoimmune thyroiditis, gout, bronchitis, Crohn's disease, diabetes autoimmune thyroiditis, gout, bronchitis, Crohn's disease, diabetes callitus, multiple sclerosis, good pasture's syndrome, graves disease, cheumatoid arthritis, slogren's syndrome, uveitis, ulcerative colitis, costeoarthritis, slogren's syndrome, uveitis, ulcerative colitis, costeoarthritis, slogren's syndrome, uveitis, ulcerative colitis, costeoarthritis, slogren's syndrome, uveitis, protozoal and helminthic infections) growth and development disorders (arteriosclerosis, cirrhosis, hepatitis, cushing's syndrome, hypothyroidism, cerebral palsy, cartaracts), cardio vascular disease (arteriovenous fistula, hypertension, vasculitis, aneurysms, congestive heart failure, angina pectoris, myocarditis, lipid disorder (fatty liver, Fabry's disease, ulceman-Pick's disease, chronic bronchitis, lump tumours); lipid disorder (fatty liver, Fabry's disease, ulceman-Pick's disease, hymothyroider sequence is human protein

RESULT 13
S68235
myosin-light-chain kinase (EC 2.7.1.117), 210K, nonmuscle - chicken
MyContains: wyosin-light-chain kinase, 108K, smooth muscle; telokin
C;Species: Gallus gallus (chicken)
C;Species: 10-Sep-1999 #sequence\_revision 10-Sep-1999 #text\_change 09-Jul-2004
C;Accession: S68235, A37099; B44389; A44389; S28277; S78216; A35093; A25810; S11652
R;Watterson, D.M.; Collinge, M.; Lukas, T.J.; Van Eldik, L.J.; Birukov, K.G.; Stepanova, FEBS Lett. 373, 217-220, 1995

le: Domain organization of chicken gizzard myosin light chain kinase deduced from a erence number: A25810; MUID:87157587; PMID:3030394
  Ajuntons: 1735/3; 1779/1; 1819/1
C;Superfamily: myosin-light-chain kinase, nonmuscle; fibronectin type III repeat homolog
C;Keywords: alternative initiators; ATP; calmodulin binding; phosphoprotein; phosphotran
E;545-599/Domain: immunoglobulin homology (MML)>
F;935-1906/Product: myosin-light-chain kinase, 108K, smooth muscle (from 5.5kb transcrip
F;108-1158/Domain: immunoglobulin homology «IMM2»
F;1451-1708/Domain: protein kinase homology «IMM2»
F;1451-1708/Domain: protein kinase ATP-binding motif
F;1750-1906/Product: telokin (kinase-related protein KRP) (from 2.7 kb transkript) #stat
F;1808-1869/Domain: immunoglobulin homology «IMM3»

"A calmodulin-binding sequence in the C-terminus of human cardiac
titin kinase.";

Eur. J. Biochem. 230:752-759(1995).

-!- FUNCTION: THIS GIANT WUSCLE PROTEIN MAY BE INVOLVED IN MUSCLE
ASSEMBLY AND IN MAINTAINING THE STRUCTURAL INTEGRITY OF
SARCOMERES. MAY HAVE PROTEIN KINASE ACTIVITY.

-!- TISSUE SPECIFICITY: MUSCLE-SPECIFIC.

-!- TISSUE SPECIFICITY: MUSCLE-SPECIFIC.
   KINASES.
-!- SIMILARITY: BELONGS TO IMMUNOGLOBULIN SUPERFAMILY. CONTAINS 112
IMMUNOGLOBULIN C2-LIKE DOMAINS AND 132 FIBRONECTIN TYPE III-LIKE
  -:- iissub statifitiii mustab-statif.
-!- SIMILARITY: TO THE CATALYTIC DOMAINS OF OTHER SERINE/THREONINE
   muscle ultrastructure and
  Eukaryota, Metazoa; Chordata; Craniata; Vertebrata; Eutele
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

   Cambridgeshire, CB10 ISA, UK. E-mail enquiries:
humquery@sanger.ac.uk Clone requeste: clonerequest@sanger.ac.uk
On Feb 14, 2002 this sequence version replaced gi:17977879;
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em:, EMBL; Sw:,
SWISSPROT; Tr., TREMBL; Wp:, WORMPEP; Information on the WORMPEP
   1601
  http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1 constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr1
RP5-1139B12 is from the library RPCI-5 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

   AC026657
  Homo sapiens
   Homo sapiens (human)
  AC026657.4 GI:9958202
  NOTE: This is a 'working draft' sequence. It currently consists of 31 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
